

We can take you from Idea to Proof-of-Concept

We take ideas that are often speculative and un-validated and prove that they are feasible, not just to prove the science but to prove that they work in real-life industrial situations. Having worked in the Discovery department of a blue-chip chemical company, our experts have decades of experience in testing ideas, evaluating feasibility through simple experiments, and proving applicability and use by business units. STRIDE brings knowledge of potential applications, competitive technologies and products, and market constraints such that a proven concept has a higher chance of commercial success. STRIDE has worked with companies to test their ideas in nanomaterials, biopolymers and more.
