

**We can take you from Proof of Concept to scaled product**

Our group of experts in chemical process engineering advise companies of all sizes, from startups to large companies, and helps them advance from Proof-of-Concept to pilot scale production. They estimate process economics, select equipment, devise in-line sensors, assess safety aspects and write Standard Operating Procedures (SOP). For example, STRIDE is currently assisting Green Recovery Technologies LLC (GRT) in exploiting an innovative patented technological solution to separate underutilized biomass streams into valuable materials for commodity and value-added applications through process development, system integration and manufacturing trials.
